

# David Warmflash

## Biography

David Warmflash M.D. is an astrobiologist, space medicine researcher, and author. He is Director of Medical Research for Mgenuity Corporation where his projects include an augmented reality guidance system for surgical procedures in space environments. David is a consultant for medicine, biology, biotechnology, and space sciences and contributes content to Medscape Neurology of WebMD and to various science and space magazines and online outlets, where his topics include space exploration and space life sciences, genetics, neuroscience, the history of science and medicine, and science literacy. His 2019 book, *Moon: An Illustrated History: From Ancient Myths to the Colonies of Tomorrow*, was the basis for an Oregon Public Broadcasting TV documentary in which he appears with various Moon experts, including Apollo 17 astronaut geologist Harrison Schmitt. David also has begun work on a new book that will focus on space medicine and other life science issues, how these issue relate to humanity's coming expansion beyond Earth, and how our spaceward expansion will improve conditions for humans on Earth. David has made appearances on numerous science-oriented podcasts, and you can stay up-to-date with everything that he is doing by following him on Twitter ([@CosmicEvolution](https://twitter.com/CosmicEvolution)) and Instagram (<https://www.instagram.com/moonillustratedhistory>).
